

# MAHI PATEL

Gujarat, India | pmahi4834@gmail.com | [github.com/patelmai48](https://github.com/patelmai48) | [linkedin.com/in/mahi-patel-865b97318](https://linkedin.com/in/mahi-patel-865b97318) | [leetcode.com/u/mai\\_15](https://leetcode.com/u/mai_15)

## SUMMARY

Integrated M.Sc. IT student who enjoys turning ideas into working full-stack web applications, with a growing interest in web application development and applied AI/ML. Experienced in building end-to-end projects — from database design and backend logic in Flask and Python, to responsive, user-friendly frontend interfaces in HTML, CSS, and JavaScript. Comfortable working across the stack and quick to pick up new tools and frameworks through hands-on projects and real-world job simulations. Also exploring automation and AI-powered tools, and building a foundation in data analytics and data-driven decision-making. Looking to join a team where I can contribute, learn from experienced developers, and keep building.

## EDUCATION

**Integrated M.Sc. Information Technology** — JG University, Ahmedabad, Gujarat

*Jun 2024 – Aug 2029*

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, HTML, CSS

**Frameworks & Libraries:** Flask, React.js, Next.js, Tailwind CSS, TanStack Query, Jinja

**Databases & Tools:** SQLite, Git, GitHub, VS Code, JWT Authentication

**Data & AI:** Generative AI (GenAI), Prompt Engineering, Exploratory Data Analysis (EDA), Data Analytics, Data Visualization, Power BI

**Core Concepts:** OOP, Data Structures, CRUD Operations, System Design, SDLC, UML, ERD

**Cloud & Security:** Cloud Computing (IaaS/PaaS/SaaS), Network Security, Risk Assessment, Log Analysis, Incident Response

**APIs & Automation:** Gmail API, Google Gemini AI, Slack Webhooks, GitHub Actions, OAuth2

**Soft Skills:** Teamwork, Communication, Problem-Solving, Decision-Making, Project Planning

## PROJECTS

**Founder Recommendation Card** | *Next.js, React, Tailwind CSS, TanStack Query, Vercel*

- Built a responsive founder recommendation web app that fetches mock founder data from a local JSON source using TanStack Query
- Implemented search/filtering along with loading, error, and empty states for a smoother user experience
- Styled a fully responsive UI with Tailwind CSS and deployed the app on Vercel

<https://github.com/patelmai48/Founder-Recommendation-Card.git>

**VoxAI Studio — Text-to-Speech Web Application** | *Flask, SQLite, JWT Auth, gTTS, HTML/CSS/JS* | *Deployed on Render*

- A full-stack web app that converts typed text into natural-sounding speech, letting users generate, manage, and download audio without any external TTS software
- Built secure JWT-based registration/login and text-to-speech conversion with multiple languages, voices, and conversion history
- Designed a responsive glassmorphism UI with dark/light mode and deployed the app to production on Render

<https://github.com/patelmai48/Text-To-Speech>

**Student Registration System** | *Flask, SQLite, HTML, CSS, JavaScript*

- Built a student registration system for educational institutions, replacing manual paper-based intake with a digital form
- Designed client- and server-side validation to catch errors early and keep submitted data clean and consistent
- Integrated a SQLite database to reliably store and retrieve student records

<https://github.com/patelmai48/StudentRegisterProject>

**Student Management System** | *Python, File Handling, OOP*

- Built a lightweight, file-based system for schools/tutors to manage student records without a full database setup
- Implemented CRUD operations — add, view, search, delete — using Python classes and objects for clean, reusable code
- Used file handling to persist records between sessions so data isn't lost when the program closes

<https://github.com/patelmai48/Student-Management-System>

**AI Email Triage Agent** | *Python, Gmail API, Google Gemini AI, Slack Webhooks, SQLite, GitHub Actions*

- Built a Python automation that monitors two Gmail accounts and uses a layered rule-based + Gemini AI classifier to flag important emails
- Sends rich, formatted Slack notifications for anything that matters, using SQLite for deduplication and GitHub Actions to run every 2 hours
- Restricted to read-only Gmail access for security, with VIP senders, keywords, and the AI prompt fully customizable

<https://github.com/patelmai48/smart-email-triage>

### **Password Generator** | *Python*

- Built a command-line tool to help users generate strong, secure passwords instead of relying on weak or reused ones
- Lets users choose the password length and mixes letters, numbers, and symbols for unpredictable results
- Built as a hands-on exercise in working with Python's random and string modules

<https://github.com/patelmai48/PasswordGenerator>

### **CERTIFICATIONS**
